

Modular electric deck oven 2 decks composition

Amalfi consists of one or more independent baking chambers and an optional leavening or stand. The baking chamber is entirely made of refractory bricks with coiled heating elements inside, allowing the perfect heat distribution over the whole surface. This oven is particularly suitable for directly pizza baking, specific for more delicate toppings and indicated for indirect baking on trays. Temperature management is electronic, power control of ceiling and floor is independent. The oven door is hinged at the bottom, with a tempered glass window to check the product during baking. The stand consists of a painted metal structure, while the leavening proofer has a stainless steel structure equipped with a heating thermostat. The leavening proofer can reach the maximum temperature of 149°F, whereas the maximum temperature of the baking chamber is 842°F.
